

# Individual Reflections Week 5

## Group Bulbasaur

Johan Mejborn

*Förra veckans mål var att verifikationsvyn som jag och Baumgartner byggt ihop skulle fungera ihop med de andra delarna av applikationen vilket den nu gör. Vidare var ett annat mål att vi skulle ha byggt det mesta av inloggningssvyn. Dessvärre är det inte klart. Det har varit en relativt kort sprint på grund av påskledighet och eftersom jag är beroende av parprogrammering och jag har befunnit mig på annan ort under påsken har jag inte kunnat få ihop programmeringstid tillsammans med Baum och Nils som jag kodar tillsammans med. Därför har mitt bidrag varit mindre denna sprint. Till nästa sprint vill jag dock kompensera för den tid jag inte lagt på projektet denna sprint och jag kommer därför sitta och programmera med Nils i helgen, samt två dagar nästa vecka vilket kommer ge projektet de timmar som jag missade. Målet till nästa sprint blir därför att bli klar med inloggningssvyn samt eventuellt en till user story och att jag vidare ska utvecklas i Android Studio. Dessutom vill jag känna att jag har planerat kommande sprint (där Valborg ska firas) på ett bättre sätt än under påsken och därför har jag redan planerat vilka dagar jag kommer sitta med projektet vilket jag kommer följa. Mitt bidrag denna vecka har varit att jag skrivit på teamreflektionen och denna reflektion jag gör nu, vidare har jag hållit mig uppdaterad i Slack med vilka framsteg vi gjort. Jag är inte nöjd med mitt bidrag denna vecka men känner mig motiverad att dra igång en ny sprint där jag är fast besluten om att bidra med mer värde nästkommande sprint.*

*Jag känner att jag är på god väg framåt med mitt mål att bli mer självständig i kodskrivandet vilket känns positivt. Jag börjar också få allt bättre känsla för hur lång tid utvecklingsarbete tar vilket är positivt och ett av mina slutgiltiga mål med projektet. Jag kommer nå dit genom vidare arbete med applikationen tillsammans med Baumgartner och Nils med handledning av IT-grabbarna som hela tiden stöttar upp när något inte fungerar som det ska för oss. Det känns fortsatt väldigt givande att arbeta i par eller fler eftersom det då blir enklare att komma framåt och jag känner också att jag får en bättre bild av helheten.*

Nils Netz

*Den här veckan har jag försökt komma up to speed igen efter min vistelse utomlands, när jag inte arbetade med gruppen. Jag har jobbat tillsammans med två andra gruppmedlemmar, som har visat mig demo och gett mig en tour av koden. I helgen ska jag arbeta med Mejborn och verkligen sätta mig in i lite nya user stories. Jag vill lära mig mer om android studio och att bygga appar, vilket jag tror att jag kan lära mig en hel del av Mejborn. Jag kommer bidra till teamets inlärningskurva genom att pilla runt i koden och förstå den fullständigt, samtidigt som jag kör på med lite trial-and-error på kodningen. Eventuellt finns det också tid att lära mig mer om scrum denna vecka, men det är endast om jag får tid över från user stories.*

*Teamets användning av scrum bidrar jag med genom att skriva teamreflektion, denna reflektion och genom att göra det som förväntas av mig under varje sprint. Vi alla är med och planerar det mesta tillsammans och det känns som att alla är nöjda med vad vi åstadkommit hittills. Personligen vill jag utveckla mina kodförmågor och fortsätta utvecklas i den takt jag gör, vilket jag gör genom att fortsätta arbeta på projektet tillsammans med gruppen. Jag arbetar på att bli mer självsäker i mitt kodande, vilket i så fall skulle hjälpa till teamets leverabler.*

Matthias Andersson Baumgartner

*Förra veckans mål var att jag och Mejborn skulle fixa klart inloggningsvyn. Utöver detta skulle vi även lösa lite småfix på verifikationsvyn som vi nästan slutförde förra sprinten. Detta har vi dock inte hunnit med främst pga. påskledighet men också dålig planering. Då våra förkunskaper är sämre och vi fortfarande är lite ovana vid programmet är vi mer beroende av vägledning än resterande gruppmedlemmar. Då jag ska iväg till annan ort nästa vecka kommer jag inte ha möjlighet att parprogrammera och således kommer mitt bidrag vara lågt. Målet inför nästa vecka blir därför att skapa en grund till log-in vyn. Detta ska lösas genom att ta inspiration från registreringsvyn och fråga resterande gruppmedlemmar om det är något jag inte lyckas lösa. Ett genomgående mål som jag har framöver är att bli mer självständig i mitt kodande så man inte behöver vara beroende av andra för att utföra något.*

*Mitt bidrag till gruppens användande av SCRUM är att jag medverkat på alla möten vi haft. Jag har även skrivit på grupp- och individuell reflektion.*

*Mitt bidrag till gruppens prestation har denna veckan varit låg, tyvärr. Har försökt koda lite själv, men körde snabbt fast och kom ingen vart. Lösningen på detta problemet är egentligen bara att bli mer självgående och lära sig koda bättre. För att nå dit ska jag parprogrammera i så hög utsträckning som möjligt för att på så sätt kunna lära av varandra. För att undvika att denna veckans bristande prestationer upprepas ska jag även bli bättre att planera in progg-sessions tillsammans med Mejborn och Nils.*

Hassan Jaber

*One of my goals for this week was to make sure that all user stories that were selected to the sprint backlog were detailed and as perfect as they could be, both acceptance-criteria/task-wise but also effort wise. This I feel we definitely achieved, by stressing how important it was during the sprint planning meeting, and then actually executing. Another goal I had was to help other group members on how to implement the Snapchat (bitmoji) api for their specific user story. But no such user story was picked for the sprint, thus I will have this goal as a standing one instead, always aiming to help.*

*I were also assigned some user stories that I would help deliver, but due to poor planning on my part and other things getting in the way, I was not able to contribute to those user stories. There were easter*

*holiday's and an exam I had to write that took up a lot of my time, which I had not taken into account when planning my contribution to the team's deliveries.*

*For this coming week though, one of my goals is to plan out my workload, this I have already done, I've decided on which days I will work on my deliveries, which I aim to stick to. In my first individual reflection, I wanted to during the course of this project; learn about Scrum, how it is used in a project, group dynamics, software engineering projects, the business side and the interplay between them all. I feel as I am on a great path of reaching those goals, but lacking in the business side of things right now. Thus I also have the goal of digging deeper into what actually would bring value to our customers and putting that knowledge into actions when prioritizing which user stories are picked for the next sprint. It is also important to note that **all** previous goals that I've had, already goals I still have, I still want to learn more about scrum, see to it that the user stories are up to par, etc. Just because I've reached my learning objective/goal for one sprint, doesn't mean that it parishes.*

*As for my contribution to this week's work of scrum, it would that I held the scrum planning meeting and put forward my thoughts about how we should work going forward. This individual reflection is also, as always one of my contribution.*

Alexander Örnbratt

*My objectives and goals for this last week were to take on more user stories, improve the wording, descriptions, and tasks for the existing user stories, and help the other group members with any programming issues that may have come up. The week before, I felt that I did not have enough to do, so during the Daily Scrum meeting on the Monday that week, I had to request to take additional user stories to fill up my time. For this last week, I made sure to take enough work to keep me busy throughout the entire week, which I felt worked a lot better. I was able to work a lot on the weekend, and then more on Wednesday evening. My main accomplishment this week in terms of user stories was to finish the "Create MeetUp" view along with Axel, of which I am responsible for the "Choose Location" view, which took a lot of time and effort to implement. Aside from the aforementioned user story, I also worked on finishing the Register view. This went well, except for the fact that I haven't yet discussed with Ludwig how a user login should work, and how this should be represented in the model of the application. This is something that I will make sure to go over in the coming week. Lastly, I did some overall cleanup of code in the project, as well as fixing the toolbar to make it translucent, adding a "Create" button on the main view, and making some changes to the navigation bar.*

*My contribution towards this week's use of Scrum has been to be active during the last Thursday meeting, as well as the current one. Even though we did not have a formal meeting on Monday (due to the Easter holiday), I was able to meet Axel at school on Tuesday and go over some work I had done on the project, as well as assisting him in getting started on the user story that I had been working on during the*

*weekend (the “Create MeetUp” view), which he contributed a great deal of work to. My contribution towards this week’s deliverables was to write this individual reflection, as well as take part in writing the team reflection for this week.*

*I am very pleased with my work and effort this week, as I feel that I accomplished everything I set out to do, both in terms of the code, and the use of Scrum and deliverables. My goals for next week have not changed since last week, i.e. I will continue to take on and attempt to complete more user stories. These I will constantly see to improve so that their specifications are up to par with what our team members need in order to be able to clearly understand and complete tasks within the user stories that they take on. I will of course make sure to continue helping my fellow group members with any problems that may arise, whether it may be a programming problem or a general issue with the project.*

*To achieve these goals and objectives, I will spend time, both on the coming weekend and Monday/Tuesday/Wednesday on finishing whatever user stories I may take. I will try to finish at least two views or a large part of the model or how it is shown on the map. This will be decided during our Sprint-planning meeting today but I will make sure to take a sizeable amount of work. I will also make sure to keep in contact with my fellow team members, in order to be able to achieve my goal of helping them and working together with them.*

Axel Svensson

*My objectives for this week was to finish the user stories I assigned to myself the week before, and to help others finish their user stories as the efforts was too high for me to choose one for myself.*

*The first objective was reached by Alex, as he helped me with them directly after the sprint planning. I did some minor stuff with the gui to completely finish them off.*

*The second objective was achieved as I took over Alex’s user story to create an meetup when he didn’t have time to finish it. I completed the majority of tasks and made sure it all worked out as planned.*

*This was a rather short sprint for me, as I took some break during the holiday. So I am happy to have accomplished as much as I did. The only thing that I want to do for next sprint is to make the gui and the functionality better by improving the the measurements in the view and make sure to test the edge cases for the activity.*

*Another goal of mine is to help others that didn’t finish their tasks for this week, and if possible picking a new user story.*

*My contribution to this weeks usage of SCRUM was to attend and take part of every discussion in the SCRUM meeting. I have finished all the tasks and helped my teammates in their job. And ofcourse the writing of this reflection and the team reflection.*

*My contribution to this weeks deliverables was to together with the group write the teamrelection, write this reflection and make sure that I can demo my work for this week (connected all the parts so that you can show everything i’ve done in one run).*

Ludwig Hultqvist

*My goals of last week were to choose one or more user stories. I chose a story which were to implement a class for accessing the database and creating objects in it. I have finished most of this story. What is missing is error handling and to fix smaller bugs, which can be done rather quick. The fact that the story is mostly done during one sprint indicates that its velocity is reasonable, but just a little bit high. I will take that into consideration when choosing stories for the next sprint.*

*Another goal were to assess the work archived, especially the efforts. I have personally access the effort of the user story I have implemented, which as stated above were a little bit high but still reasonable. The overall work archived by the group will be accessed during the sprint review. If any changes are required in our workflow, it will be decided there.*

*In short, my deliveries this week has been to continue implementing the applications communication with the database as well as assessing my work, writing this reflection and together with the group writing the team reflection. My contribution to this weeks use of scrum has been to present my work during the meeting of thursday, as well as planning next week.*

*I am mostly happy the result of my work this week. The database can now easily be accessed, which means that it will now be easier to slice the cake when implementing user stories which are dependent on the database. However, it is not yet entirely reliable. This fixes required, as stated above, will be fixed by next sprint.*

*For the next sprint, my goals are to finish the minor fixes of this week's user story, as well as testing it, so that it can be moved to the 'Done' pile. This will be done by me taking the time to sit down and program.*

*Similarly to last week, my goals are as well to choose one or a few user stories during the sprint planning and implement them until the end of the sprint. Which will be done by myself or together with a few others by working together. I will also try to be more careful when setting the efforts of the chosen stories. I will as well assess the work I have done, and the general work done by the group during the sprint.*
